

THE DRIVER HAS A VOICE DISORDER

IT IS CALLED MUSCLE TENSION DYSPHONIA AND IT AFFECTS THE WAY I SPEAK

Please be patient with me and try to listen closely as it may be difficult for me to speak.

My voice may sound strained or shaky. It may also sound weak as I am may have to whisper.

Stress can aggravate it, so I may struggle to get my words out.

It helps to eliminate background noise as my voice may not have a lot of volume.

Please understand that I may need to write down what I am trying to say or type it on my cell phone.
